DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Number 4,106,858 to Dargent et al (hereinafter Dargent).

Dargent discloses in figures 3-4, 7 and column 3, line 38 to column 7, line 19, a liquid crystal display comprising a first substrate (52) and a second substrate (56), said first substrate and second substrates being located facing one another with a liquid crystal material layer (50) thereinbetween, a first and second electrode (54, 58) arranged at the first and second substrates, said electrodes formed on liquid crystal sides of the first and second substrates, whereby the liquid crystal material layer exhibits zero-pretilt (when electrodes have no voltage applied) and at least one of the electrodes at its end parts is connected to at least a first (Vhf) and a second (Vbf) mutually exclusive and adjustable voltage and is adapted to exhibit essential residual resistance between the end parts.

As to claim 2, the voltage difference can be adjusted during operation.

As to claims 3-4, the voltage and applied electric fields are adjustable during operation of the device.

As to claim 5, any electronic part would have some form of resistance.

Art Unit: 2883

As to claim 6, operation of the electrodes are independent and can operate a voltage differential maintainable during operation.

As to claim 7, two voltage sources are disclosed and would have a voltage drop between parts.

As to claim 8, a transparent resistive electrode is disclosed.

As to claim 9, the alignment is done electronically.

As to claims 10-11, tin oxides are disclosed (column 7, line 10).

As to claims 12-14, SiO or impregnated surfactants are used.
